

Talha Yousuf

Software Engineer / talhayousuf.work@gmail.com / +92-307-6003927 / LinkedIn / GitHub

Skills:

- **Frontend:** React, Next.js, Redux, TypeScript, JavaScript, Tailwind CSS, Material UI, Angular
- **Backend & Databases:** Node.js, Python, Express.js, Nest.js, PostgreSQL, MongoDB, REST APIs, System Design
- **Cloud & DevOps:** AWS, Docker, Git, Serverless, Infrastructure as Code
- **Data & AI/ML:** Pandas, NumPy, PyTorch, LangChain

Experience:

Full Stack Engineer | *Freelancer/Contractor*

March 2025 - Present

- Integrated local LLM model and Slack APIs with backend microservices to deploy a proprietary AI assistant within company's Slack, resulting in successful funding round evaluation.
- Designed and implemented event-driven workflows in microservices using Kafka and REST APIs, building complex backend services with NestJS and PostgreSQL to deliver core business functionality for a fintech platform.
- Delivered employee management system MVP using NestJS, React, and PostgreSQL, providing comprehensive HR functionality.
- Built and shipped feature flagging internal tool MVP with NestJS, React, and PostgreSQL stack.
- Led architecture and system design decisions, including database schema design, for implementing new product features.
- Improved system performance and scalability through database normalization, query optimization, and refactoring backend service.

Software Engineer | *DPL Pvt. Ltd.*

September 2023 - February 2025

- Led migration of multi-tenant B2B e-commerce platform from legacy to modern architecture, maintaining feature consistency across applications and enabling continued migration without disrupting active tenants.
- Implemented synchronized user authentication across multiple legacy and modern applications, using redirects and auth-key strategies, ensuring seamless transitions for users without service disruption.
- Leveraged Next.js SSR to build dynamic SEO pages, improving search engine rankings and traffic acquisition for the platform.
- Built RESTful APIs and AWS Lambda microservices using Node.js and PostgreSQL, supporting core platform functionality across multiple applications within the platform.
- Integrated google analytics tracking to capture user engagement and performance metrics, enabling data-driven product decisions.
- Debugged and optimized serverless deployments, resolving production issues and improving Lambda function performance.
- Built scalable AWS Cloud Infrastructure POC using CloudFormation, with auto-scaling, load-balancing, database/cache management, security, and deployment pipeline, delivering an architectural template for future IaC usage.

Senior Software Engineer | *Neoteric Softwares Pvt. Ltd.*

December 2023 - May 2023

- Built frontend for an NFT marketplace with React, Redux, and TailwindCSS, integrating web3-react for wallet connections and blockchain transactions, additionally built the admin CMS for content management and supporting backend services/APIs.
- Led project planning including resource allocation, delivery estimations and timelines.
- Established teams engineering standards for code quality, design patterns, and development workflows using pre-commit tools.

MERN Stack Developer | *Sedenius Technologies Pvt. Ltd.*

April 2021 - December 2023

- Led the development of a comprehensive asset management PWA using React, Node and Postgres, delivering features like task scheduling and planning, resource allocation, role-based access, and analytics dashboards.
- Developed features and resolved critical bugs for React Native smart-home iOS/Android app, unblocking and delivering previously stalled project to market launch.
- Built coding assessment platform MVP using React and Firebase for internal technical recruitment and evaluation.
- Collaborated in system architecture and database design, wrote supporting APIs, led database normalization effort.
- Implemented GDPR-compliance features to meet data protection regulatory requirements.
- Maintained Jenkins CI/CD, implementing Bash scripts for managing release on self-hosted servers.
- Wrote comprehensive E2E test automation suites using Cypress for cross-browser and cross-device validation, parallel to unit test coverage using Jest, ensuring TDD best practices.

Design Engineer | *CARE Pvt. Ltd.*

July 2019 - April 2021

- Developed and deployed custom IoT web dashboards for enterprise clients, owning full frontend development and managing deployments, resulting in successful client demos and production rollouts.
- Owned client-facing solutions design by collaborating with stakeholders to collect and translate business requirements into features.
- Built Python data pipelines to ingest, clean, and transform raw IoT sensor data, for automated report generation that delivered actionable insights for data-driven decision-making.
- Built and maintained Node.js backend services and REST APIs to support multiple projects.
- Developed embedded IoT sensor nodes with firmware, PCB design, and on-site deployments resulting in successful field tests.

Co-founder / Embedded Systems Engineer | *Self-Employed*

April 2018 - June 2019

Education:

Bachelors of Electrical Engineering | *NUST*

Class of 2018
